PROBLEM STATEMENT 39: SECOND-HAND PRODUCT ESCROW MARKETPLACE

USE-CASE FLOW SPECIFICATION

Use Case ID: UC-05

Use Case Name: Raise Dispute

Primary Actor: Buyer

Supporting Actor: Admin

Purpose:

To allow the buyer to raise a dispute when the inspection report or the condition of the second-hand product is contested and to route the order for dispute resolution.

PRECONDITIONS

1. The buyer has an active order associated with an escrow transaction.
2. An inspection report has been submitted for the item.
3. The buyer identifies an issue with the inspection report or the product condition.
4. The order is eligible for a dispute.

POSTCONDITIONS

1. A dispute ticket is created for the order.

2. The escrow release is frozen.
3. Account withdrawals are prevented during the active investigation.
4. The dispute is routed to the Admin dispute resolution queue.

MAIN SUCCESS SCENARIO

1. The Buyer reviews the inspection report and the condition of the received product.
2. The Buyer identifies that the inspection report or product condition is contested.
3. The Buyer selects the "Raise Dispute" option.
4. The system displays the dispute submission form.
5. The Buyer provides the required dispute details and submits the dispute.
6. The system creates a dispute ticket associated with the order.
7. The system immediately freezes the escrow release for the order.
8. The system prevents account withdrawals during the active investigation.
9. The system routes the dispute ticket to the Admin dispute resolution queue.
10. The system confirms that the dispute has been successfully raised.
11. The use case ends successfully.

ALTERNATE FLOW

1. At Step 5, the system detects that required dispute information is missing.
2. The system displays a message requesting the missing information.
3. The Buyer provides the required information and resubmits the dispute.
4. The system creates the dispute ticket.
5. The system freezes the escrow release and prevents account withdrawals during the active investigation.
6. The system routes the dispute ticket to the Admin dispute resolution queue.
7. The system confirms successful dispute submission.

8. The use case ends successfully.
